Author Index for Vol. 10

Allen, R. J., 271

Banks, S., 205
Baskerville, R., 749
Black, S., 51
Blain, L., 263
Bologna, J., 303

Carr, J., 69
Chang, C. C., 129
Cohen, F., 239
Cohen, F. B., 535, 541
Coomaraswamy, G., 765

Domingo-Ferrer, J., 639

Evans, P., 325

Fak, V., 626
Farquhar, B., 21

Goyal, M. L., 661
Gritzalis, D., 141

Hans de Lange, R. A., 251
Hiles, A., 299
Himel, B., 497

Jajodia, S., 413
Jan, J. K., 129

Katsikas, S., 141
Keklikoglou, J., 141
Kievit, K.-A., 331
Kowalski, S., 213, 217, 228
Kruys, J. P., 429
Kumar, S. P. R., 765

Laferriere, C., 41
Laurichesse, D., 263
Lynch, P., 711

Marhic, M. E., 765
Menkus, B., 199, 293, 405
Mitchell, C., 37
Murray, W. H., 723

Nurmi, H., 553

O'Shea, G. F. G., 443
Okamoto, E., 25

Paans, R., 251, 309
Pfleeger, S. L., 515
Post, G. V., 331
Pottas, D., 653
Press, J., 117

Preston, C., 701

Rihaczek, K., 101
Robertson, B., 17
Rosenthal, P., 497
Rushinek, A., 345
Rushinek, S., 345

Salomaa, A., 553
Sandhu, R., 413
Santean, L., 553
Schramm, C., 359
Sherizen, S., 601
Singh, G. V., 661
Steinke, G., 612

Tanaka, K., 25
Thimbleby, H., 111
Thuraisingham, B., 727
Tomaras, A., 141

Varadhara, V., 51
Varadharajan, V., 37
Von Solms, S. H., 653

Wang, S. J., 129
Wood, C. C., 399, 524

Computers & Security, 10 (1991) 793–797

Subject Index for Vol. 10

Access control
  a DOS-based POset implementation, 541
  a dynamic key–lock-pair access control scheme, 129
  access control in distributed heterogeneous database management system, 661
  algorithm-sequenced access control, 639
  auditing the SNA/SNI environment, 251
  design aspects of access control in a knowledge base system, 612
  operating system integrity, 443
Accessibility
  accessibility *vs.* security: a look at the demand for computer security, 331
Algorithms
  algorithm-sequenced access control, 639
  data encryption features for computer hardware and software profitability: I/O ports, expansion slots, algorithms, cyphers and security, 345
Authentication
  a DOS-based POset implementation, 541
  beyond RACF extending user authentication controls, 711
Authorization
  access control in distributed heterogeneous database management systems, 661

Ballot secrecy
  secret ballot elections in computer networks, 553
Business resumption planning
  business resumption planning: exercising your emergency response teams, 497

Certification
  a framework for security requirements, 515
CICS systems
  understanding IBM's CICS systems to improve security, 205
Ciphers
  data encryption features for computer hardware and software profitability: I/O ports, expansion slots, algorithms, cyphers and security, 345
  modified forms of cipher block chaining, 37
Classification of medical data
  data security in medical information systems: the Greek case, 141
Competitive advantage
  using information security to achieve competitive advantage, 399
Confidentiality
  fibre-optic LAN/MAN systems to support confidential communication, 765
  security transfer of identity and privilege attributes in an open systems environment, 117
Control
  "control" is fundamental to successful information security, 293
Cryptanalysis
  modified forms of cipher block chaining, 37
Cryptographic protocol
  secret ballot elections in computer networks, 553
Cryptography
  algorithm-sequenced access control, 639
  modified forms of cipher block chaining, 37
  optimized implementation of RSA cryptosystem, 263
Cybernetic analysis
  cybernetic analysis of national computer security, 217
  cybernetic analysis of the 12th U.S. national computer security conference, 228

Data encryption
data encryption features for computer hardware and software profitability: I/O ports, expansion slots, algorithms, cyphers and security, 345
Data integrity
secure transfer of identity and privilege attributes in an open systems environment, 117
Database management system
access control in distributed heterogeneous database management systems, 661
Database management systems
integrity principles and mechanisms in database management systems, 413
multilevel security issues in distributed database management systems II, 727
Demand
accessibility *vs.* security: a look at the demand for computer security, 331
Design
design aspects of access control in a knowledge base system, 612
Detection
computer fraud—the situation, detection and training, 325
Distributed systems
multilevel security in a distributed object-oriented system, 51
progress in secure distributed systems, 429
secure transfer of identity and privilege attributes in an open systems environment, 117
DOS protection
a note on high-integrity PC bootstrapping, 535
Dynamic
a dynamic key-lock-pair access control scheme, 129

ECMA
progress in secure distributed systems, 429
EDP-auditing
auditing the SNA/SNI environment, 251
Elections
secret ballot elections in computer networks, 553
Electronic data interchange
electronic data interchange—security risk or not?, 69
Electronic mail
electronic mail—is it safe to use?, 17
Emergency response
business resumption planning: exercising your emergency response teams, 497
Encryption
auditing the SNA/SNI environment, 251
modified forms of cipher block chaining, 37
ESA
with MVS/ESA security labels towards B1, 309
European unification
European unification '92 impacts on information security, 601
Expansion slots
data encryption features for computer hardware and software profitability: I/O ports, expansion slots, algorithms, cyphers and security, 345

Fault tolerant computing
a note on high-integrity PC bootstrapping, 535
Fire risks
computer fire risks, 299
Fraud
computer fraud—the situation, detection and training, 325
Freedom
burning computer security, privacy, and freedom issues, 524

Hackers
"hackers": know the adversary, 405

I/O ports
data encryption features for computer hardware and software profitability: I/O ports, expansion slots, algorithms, cyphers and security, 345
Identity
computer verification of human users' identity: a theoretical model and some evaluation criteria, 626

Identity-based digital signal
key distribution system for mail systems using ID-related information directory, 25
Information
"control" is fundamental to successful information security, 293
European unification '92 impacts on information security, 601
multilevel security in a distributed object-oriented system, 51
Information security
data security in medical information systems: The Greek case, 141
progress in secure distributed systems, 429
using information security to achieve competitive advantage, 399
Integrity
a DOS-based POset implementation, 541
a note on high-integrity PC bootstrapping, 535
integrity principles and mechanisms in database management systems, 413
operating system integrity, 443
predicate based polyinstantiation in multi-level secure DBMS, 41
ITSEC criteria
the harmonized ITSEC evaluation criteria, 101

Key-lock pair
a dynamic key-lock-pair access control scheme, 129
Knowledge base system
design aspects of access control in a knowledge base system, 612
Knowledge-based methods
a computerized management reporting aid for a mainframe security system, 653

LAN/MAN systems
fibre-optic LAN/MAN systems to support confidential communication, 765

Management reporting
a computerized management reporting aid for a mainframe security system, 653
Medical data security
data security in medical information systems: The Greek case, 141
Military computing
trusted oracle-multilevel secure data management for military computing, 271
Modes of operation
modified forms of cipher block chaining, 37
Multi-level secure DBMS
predicate based polyinstantiation in multi-level secure DBMS, 41
Multilevel security
trusted oracle-multilevel secure data management for military computing, 271
multilevel security in a distributed object-oriented system, 51
multilevel security issues in distributed database management systems II, 727
MVS
computing centers undermine MVS security, 359
with MVS/ESA security labels towards B1, 309

National computer security
cybernetic analysis of national computer security, 217
cybernetic analysis of the 12th U.S. national computer security conference, 228
the ABCs and Es of national computer security policies, 213
Network security
auditing the SNA/SNI environment, 251
Networks
secret ballot elections in computer networks, 553

Object-oriented systems
multilevel security in a distributed object-oriented system, 51
progress in secure distributed systems, 429
One-way key distribution
key distribution system for mail systems using ID-related information directory, 25
Open systems
progress in secure distributed systems, 429
secure transfer of identity and privilege attributes in an open systems environment, 117
Operating system
operating system integrity, 443

Polyinstantiation
predicate based polyinstantiation in multi-level secure DBMS, 41
POsets
a DOS-based POset implementation, 541
Privacy
a DOS-based POset implementation, 541
auditing the SNA/SNI environment, 251
burning computer security, privacy, and freedom issues, 524
Protection of medical data
data security in medical information systems: The Greek case, 141
Public directory
key distribution system for mail systems using ID-related information directory, 25
Public-key cryptosystem
optimized implementation of RSA cryptosystem, 263
secret ballot elections in computer networks, 553

Query processing
multilevel security issues in distributed database management systems II, 727

RACF
beyond RACF extending user authentication controls, 711
Risk analysis
a cost analysis of typical computer viruses and defences, 239
risk analysis as a source of professional knowledge, 749
Risk assessment
one approach to risk assessment, 21

Security
"control" is fundamental to successful information security, 293
a computerized management reporting aid for a mainframe security system, 653
a framework for security requirements, 515
a note on high-integrity PC bootstrapping, 535
accessibility *vs.* security: a look at the demand for computer security, 331
algorithm-sequenced access control, 639
burning computer security, privacy, and freedom issues, 524
computing centres undermine MVS security, 359
data encryption features for computer hardware and software profitability: I/O ports, expansion slots, algorithms, cyphers and security, 345
electronic data interchange—security risk or not?, 69
European unification '92 impacts on information security, 601
how to begin dealing with computer security, 199
integrity principles and mechanisms in database management systems, 413
operating system integrity, 443
secure transfer of identity and privilege attributes in an open systems environment, 117
understanding IBM's CICS systems to improve security, 205
Security ethics
risk analysis as a source of professional knowledge, 749
Security knowledge
risk analysis as a source of professional knowledge, 749
Security labels
with MVS/ESA security labels towards B1, 309
Security policy
multilevel security issues in distributed database management systems II, 727
Signatures
algorithm-sequenced access control, 639
SNA
auditing the SNA/SNI environment, 251
Statistical decision theory
risk analysis as a source of professional knowledge, 749
Supervisor call
computing centres undermine MVS security, 359
Survey
accessibility *vs.* security: a look at the demand for computer security, 331

SVC
computing centres undermine MVS security, 359
System architecture
multilevel security issues in distributed database management systems II, 727

Training
computer fraud—the situation, detection and training, 325
Transaction management
multilevel security issues in distributed database management systems II, 727

Trusted systems
a DOS-based POset implementation, 541

Verification
computer verification of human users' identity: a theoretical model and some evaluation criteria, 626
Viruses
a cost analysis of typical computer viruses and defences, 239
can viruses ever be useful?, 111
creating a corporate virus plan, 701
letter to the Editor, 723
